Introduction

Engage your users by using images as choices on radio button and checkbox questions. You can have your users make a selection by using the traditional boxes, or by removing them all together so they can click directly on the image.

Replace Text with an Image

1. Add a radio button or checkbox question to your form.
2. Select a choice.
3. Click **Image** and choose an image to upload.
4. Provide **alternate text** for your image. This text will display if the image does not display properly, but it is also used in other areas of FormAssembly.
5. Define the **width** and/or **height** of the image.
6. Change the **image alignment**, if needed.
7. Click **Insert**.

The screenshot shows a form editor interface. At the top, there are navigation tabs: 'ADD CONTENT', 'THEMES', 'PROPERTIES', and 'OUTLINE'. On the right, there are buttons for 'Preview', 'Undo', 'Redo', and 'Save'. The main content area displays a form titled 'Form Title'. Below the title is a 'Sponsorship Level' field with three radio button options. The first option is 'Sapling \$300 / Month' with a tree icon. The second option is 'Seedling \$100 / Month' with a seedling icon. The third option is 'Choice C'. Below the options is a 'Submit' button.

Masking

You can choose to mask the radio button or checkbox when replacing the choice text with an image. The images themselves will then act as buttons that users can select.

This can make for a better user experience in some cases. For instance, if the image meanings are clear and understandable, masking could be a good choice. However, if you would like to show the images in full color at all times, masking is not a good choice because the options that are not selected will be grayed out.

1. Select the entire radio button or checkbox field
2. Click the **Options** button
3. Click on the **Presentation tab** to expand it.
4. Select **Mask checkbox/radio buttons**
5. Click **Done**.
