### Overview

The Review Before Submit option can add an intermediary step between form submission and the display of your [Thank You](#) page. This allows your respondents to check their form for mistakes and correct any they may have made.

---

## The Review Page

The respondent is greeted with this message at the top of the Review page. This message is not currently editable:

**Please review your response and confirm.**

You **MUST click the confirm button** at the bottom of this page to finalize your response. If you want to print this page for your record, you may do it now.

**Note:** The link to the Review page is valid for 7 days (by default) after the email is sent. After that time, the link will expire. An administrator [can adjust this default setting](#).

---

## Sensitive Data

When using "Review Before Submit" on your form, if a form respondent makes a correction, any fields that are marked as "Credit Card Number" or "CVV Code" will be cleared. The previous information the respondent entered into the field will no longer be available.

PII, PHI, and General Sensitive Data can be resumed with the stored values displayed, like other fields.
