Introduction

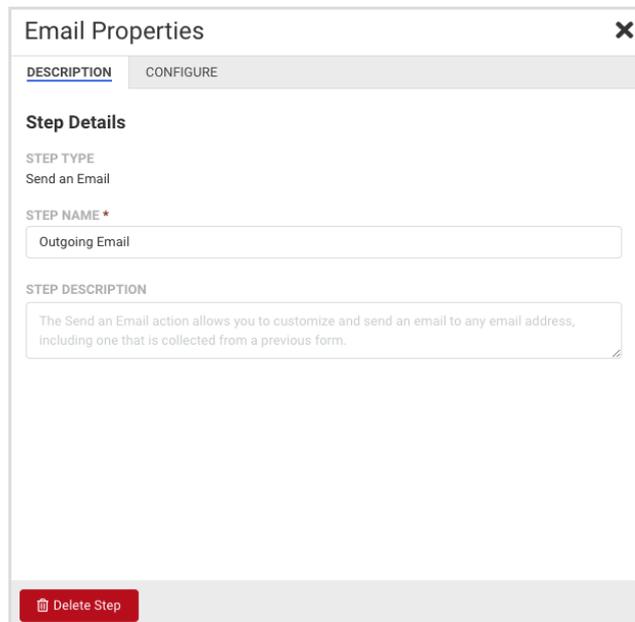

The Email Step allows you to send emails to a manually entered email address, or to email addresses collected in form responses above this step in the Workflow Builder Map.

The Email Step can be used to configure both internal and external email messages, and you can add as many as you would like for each form submission in your workflow.

Properties Panel Configuration

Adding the Email Step will automatically open the Properties panel so that you can configure the step. The Properties panel for this step contains the following tabs: **Description** and **Configure**.

You can delete any step by opening the Properties panel for the step and clicking the red " **Delete Step**" button at the bottom.

The screenshot shows a window titled "Email Properties" with a close button (X) in the top right corner. The window has two tabs: "DESCRIPTION" (selected) and "CONFIGURE". Under the "DESCRIPTION" tab, there is a section titled "Step Details". Below this, there are three fields: "STEP TYPE" with the value "Send an Email", "STEP NAME *" with the value "Outgoing Email" in a text input field, and "STEP DESCRIPTION" with a text area containing the text "The Send an Email action allows you to customize and send an email to any email address, including one that is collected from a previous form." At the bottom of the panel, there is a red button with a trash icon and the text "Delete Step".

Description Tab

This tab handles the details of the step itself, such as the Step Name and Step Description.

- **Step Name** - This field allows you to give the step a custom name, which can help you differentiate between your steps. It has a default value of "Outgoing Email" until manually changed.
- **Step Description** - You can use this field to add a description to your step.

Configure Tab

The Configure Tab contains all the fields you'll need to craft your email.

- **To (recipient)** - If you would like to enter multiple recipient email addresses, they must be separated by commas (,) or semicolons (;).
- **BCC**
- **Sender Email** - This is the email address from which the recipient will receive the email. You **cannot** enter multiple email addresses in this field.
- **Sender Name**
- **Reply-To Email** - Any replies to the notification email will be sent to the address configured here. Set this field either manually or with the Formula Editor. With the Formula Editor, email fields set within a form can be used as reply-to email addresses.
- **Reply-To Name**
- **Email Subject**
- **Send Email As HTML** or as **PlainText**

Note:

- FormAssembly requires all custom domains configured in sender emails to have an SPF record with FormAssembly as a supported host. [Please see this article for information on configuring an SPF record](#).
- If you send more than 5,000 emails per day from your domain, including those sent through FormAssembly with a custom sender configuration, consider configuring DKIM. [Please see this article for information on DKIM setup in FormAssembly](#).
- As an added security measure, when configuring a Sender Email, the email address entered requires verification before the Sender Email is updated. Emails will be sent from "no-reply@formassembly.com" until the new email address is verified. Emails are verified per FormAssembly instance.
 - If an email has not been verified:
 - a pending verification message appears under the changed field
 - the email address entered receives an email with a link to complete the verification
 - the validation link expires after 24 hours
- The Reply-To Email does not require verification.

Note:

- The Formula Editor in the Workflow Builder has some additional aliases when compared to the form-specific Editor. Namely, you can now select fields and aliases from all previous forms when building your formulas.
- Selecting these previous forms' fields and aliases in the Formula Editor will create a "super-alias" - these work across multiple forms and steps.
- Super-aliases have the following format: `%%[workflow step #]![field alias]%%`

Email Properties [X]

DESCRIPTION | **CONFIGURE**

Email Customization

What would you like this email to say?

TO * [f] BCC [f]

This field requires a valid email address or a field with the Validation Rule set to Email in the form. Multiple email addresses must be comma-separated.

SENDER EMAIL * [f] SENDER NAME [f]

This field requires a valid email address.

REPLY TO [f] REPLY TO NAME [f]

EMAIL SUBJECT [f]

SEND EMAIL AS: HTML Plain Text

Attach Document

Attach Documents

Check the "**Attach Document**" checkbox to attach a PDF of any form response collected before this step, or [documents generated by Document Steps](#) within the workflow, to the email.

After checking the "**Attach Document**" box, you must select at least one document to add to the email.

The Document Selector dropdown includes the following options:

- **Document:** All documents from all Document Steps in the workflow

Note: Though all generated documents from Document Steps before AND after appear in this list, **if a document generated after the Email Step is selected, it will not be sent.**

- **Form Response PDF:** All form names from Form Steps before the Email Step appear in this list section
 - choose which responses to send as PDFs
 - set PDF names with either text or formulas
 - send one or multiple response PDFs.

Email Content

This final text area allows you to add and customize the body of your email. You can style the text, add links and images, reference field aliases from any form above this step in the Workflow Builder Map, and reference workflow-specific aliases.
